Matter: Confirmation of functionality for devices intended for project SODRA

Based on request from our official **PLATINUM Partner** – UAB „Biznio mašinų kompanija“ – company which is granted status of being **preferred partner** for the **project SODRA**, I would like to state that:

Additional functionality of user accounting and management software offered by the supplier - users of A, B, C type multifunction printers have capability of having text recognition (OCR) functionality after authentication when scanning documents:

- (a) Ability to enter additional information when scanning documents: The user may enter metadata for the document being scanned (eg, document number, document date, or document type) that is associated with the document being scanned and entered directly through the device control screen.
- b) The OCR solution is able to save scanned documents in the following formats: TIFF, JPEG, searchable PDF, DOC, DOCX;
- c) Software with OCR is capable to submit documents by directing files to a hotfolder / network folder or sending an e-mail. email submitting from the device and is integrated into the software system with user authentication. Separate software is not required to be used to meet this functionality.
